

This is the Environment Policy of Railway Drainage Limited (RDL) for 2019-20. It is subject to review at least annually to ensure that it remains appropriate to the business' purpose, the context within which we and all interested parties operate and continues to support our scope of work:

The provision of rail and non-rail project management, including drainage works, minor track works, supply and operation of plant in possessions on Network Rail controlled infrastructure and private sites.

Continued awareness and understanding of policy is ensured through initial induction, ongoing briefing, regular discussion and display on company noticeboards. This policy is available to outside interested parties on our website and in writing on request.

This policy ensures continued compliance with the Environmental Protection Act 1990 and relevant legal and regulatory requirements including those of Network Rail. RDL's business processes are aligned with ISO14001 Environmental management systems.

Business objectives are set and implementation measured to support policies and the business plan, to ensure continual improvement of processes and performance. Responsibility and accountability are disseminated through job descriptions and supplemented with personal objectives, set, measured and reviewed by line managers. Monitoring of the effectiveness of key areas of policy and process are measured on an environmental risk basis by line managers and through internal and external audit. The executive take responsibility for the effective implementation of corrective action.

Protection of the environment is assured through the assessment of aspects and control of impacts to prevent pollution and maximise the efficiency of the use of natural resources and maintain sustainability.

The executive will disseminate a behaviour based leadership role by example of a positive attitude and good communication towards the protection of the environment and sustainable practices and processes.

Environmental behaviour will be measured though executive tours, management site visits, informal discussion and formal site checks.
